5 Filter Bottless Water Purification Cooler

- BOTTLESS - NO MORE HASSLE, NO MORE REFILLING, NO MORE PLASTICS
- 5 FILTER, REVERSE OSMOSIS PURIFICATION
- SANITIZATION & IMMUNE DETOX
- PH BALANCE & NUTRIENT BOOST
- CLEAN FRESH TASTE
- RAPID REPLENISHMENT
- EXTRA LARGE RESERVOIRS
- LG PARTS & COMPONENTS
- INNOVATIVE STATE-OF-THE-ART TECHNOLOGY
- ALL STAINLESS STEEL RESERVOIRS
- SANITARY DISPENSING USING PUSH BUTTONS/NO SPIGOTS
- LEAK DETECTION
- INTERNAL CUP DISPENSER
- ATTRACTIVE DESIGN/LED LIT DISPENSER

INCONVENIENCES OF BOTTLED WATER

A national survey among 500 human resource managers indicates that there is clearly a desire for treated drinking water among employees

Nearly 60% believe the water they drink can affect their health

2/3 responded that employees are required to replace heavy bottles on water coolers

More than 130 studies suggest that Bisphenol A (BPA) exposure at very low doses is linked to a staggering number of health problems, including prostate and breast cancer, obesity, attention deficit and hyperactivity disorder, brain damage, altered immune system, lowered sperm counts, and early puberty. Source: www.environmentcalifornia.org

No more high costs, spillage, storage, delivery inconveniences and security issues, lifting 42 lb. bottles, handling and bacteria issues.

No more sanitizing your bottled water cooler with a chlorine bleach solution with each bottle replacement. This is something few businesses bother to do.

5 Filter, 9 Stage Reverse Osmosis Purification Process

Sediment Filter:

The 1st stage is a treated filter, Handling & which removes sediment such as rust, dust, clay, and pipe residue in water through a 10 - micron filtration process.

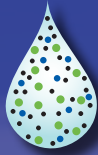

Pre- Carbon Filter

The 2nd stage is a pre carbon filter to eliminate chemicals such as chlorine, solvents, pesticides, and various organic compounds which exist in nearly all water sources.

Reverse Osmosis Membrane:

The 3rd stage uses state of the art Reverse Osmosis technology, which removes all metals, arsenic, pharmaceuticals, lead, mercury and other solids and 99.9% of bacteria. Only pure water can pass through the .0001 micron purification membrane.

PH Balance:

The 4th stage increases alkalinity levels to restore PH balance. Acidic water will decrease hydration and slow metabolism. Drinking higher alkaline water contributes to more energy and improved hydration.

Immune Detox:

The 5th stage provides an immunity detoxification process. Natural minerals are introduced in the PH filter that increases immunity levels and provided protection against lead poisoning.

Nutrient Boost:

The 6th stage provides an increase of minerals in the water and replenishes the supply of calcium and magnesium to boost energy.

Sanitization:

In the 7th stage, the water passes through a natural antiseptic and antibacterial process in the PH filter to eliminate bacteria in the tanks, lines and spigots.

TCR Filter:

The 8th and 9th stages run through a final polishing taste and chlorine reduction carbon filter which assures the cleanest, freshest, healthiest best tasting water possible.

Hot Water Capacity: .5 Gallons

FILTRATION HIGHLIGHTS

STAGE 5 - IMMUNE DETOX

ZEOLITE is a mineral found in volcanic rock, ash and sea salt. It provides an immune-detox to help prevent illness and absorbs the toxins, free radicals, and inorganic metals from the body.

STAGE 7 - SANITIZATION

Uses COLLOIDAL SILVER, because no known pathogenic organism can live in the presence of even minute traces of the chemical element metallic silver, colloidal silver is effective against more than 650 pathogens. In fact, it is said to give the body a second immune system, creating a shield against disease of all kinds.

Natures Hidden Treasure

In our modern world we are bombarded by stress every day, as well as a barage of toxins - no matter how careful we may be. By removing the toxic burden in our cells, our body has a greatly improved capacity to heal and balance itself, removing most of the cause of disease and aging.
